Experience

Microsoft | July 2021-July 2024

Software Engineer II on Sovereign Clouds, SSM and DRI Portals

Accepted mentor's challenge and *embraced the growth mindset* joining Sovereign Engineering as a software engineer with no computer science background. This stimulated a transformation, promoting deeper understanding of Microsoft's culture of growth, hands-on knowledge of Azure tools, the full software engineering lifecycle, and the CTS Portal experience—Ultimately galvanizing a stronger and more aware Microsoft design contributor in the age of AI+ Sovereign Clouds. CloudScreened. Tented. AM95.

Microsoft | January 2020-July 2021

UX Designer on Personnel's PM Team and serving multiple JEDI initiatives

Served as the design quality gatekeeper for Sovereign Engineering. Maintained trust, demonstrating vigilance of operational security, situational awareness, and attention to detail. Ensured pixel-perfection and drove consistency across product features. Responsible for producing design tokens for teams using a custom prototyping framework rolled in-house as a wrapper around FluentUI and deployed to a secure Preview Site querying Graph in React/TypeScript/CSS Modules. Conducted live coding exercises over Teams video shares using real and simulated data (PMs *loved* this capability). Decreased the time between design and implementation. Reduced friction for all Microsoft employees and DOD customers getting ideas out into design exploration and prototyping products to ship. Engaged with PMs on Personnel and across JEDI teams to influence product specs. Produced and delivered low and high-fidelity prototypes. Collaborated closely with development teams to facilitate design implementation, handing off Previews to engineering for implementation. Accessibility testing and responsive design A/B testing via design in browser.

Nordstrom | May 2018-May 2019

Senior UX/UI Designer on CompIntel and PRICE org

Led design modernization effort for the PRICE org alongside multiple engineering teams practicing a build it first style of lean UX. Led CompIntel design efforts collaborating with users, PMs, and engineers. Streamlined existing workflows into a singular tool. Established the CommonUI design system. Demoed prototypes to leadership emphasizing scalability and speed completing tasks. Reduced operational costs by removing dependency on a third-party webscraping tool to and increased accuracy across price matching. Routinely evaluated PRICE tool success while validating AI/ML human-in-the-loop integrations. Sought out alliances and partnerships across orgs for the coalescence of a singular Enterprise Tool.

Facebook | May 2014-May 2015

UI/UX Designer on Facebook's zero-install cloud-based IDE

Retained for a zero-install, cloud-based IDE code-named: Lyric. The mature and well-loved collaborative software that was used daily by a significant amount of Facebook engineers from 2014-2017. Took a product that lost hundreds of users and grew it organically into thousands of strong proponents for Lyric as we moved to open-source. Not everything that's a win ships to market as expected. Product became a set of packages known as Nuclide and a hackathon project "Atom In Orbit." See accompaniment: Letter of Recommendation from Facebook.

SonoSite | May 2013-August 2013

UX Prototyper on iViz, handheld ultrasound device

Prototyped iViz, a hand-held portable ultrasound device for military operations and emergency rooms. Enriched design practice learning from trained industrial designers. Ran usability tests and studied user behavior through A/B testing by presenting familiar devices using novel interfaces and recorded the users' success rate performing specific actions and evaluated the results. The device could be pocketed and saved ~20 pounds from pack weight. An iPad Mini was chosen because of the similar screen dimensions, expediency to build, test, and prototype. Model sent off for the finished product to be re-engineered as a HIPPA-compliant handheld that successfully went to market.

Skills

Critical Thinking
Compelling Storytelling
Writing Documentation (SPIKES)
Product Design
Product Strategy
Product Management
Agile Methodology
Design Tokens
Accessibility, ARIA, WCAG, aXe
Advanced Figma, Sketch, Adobe Suite
Storybook.js, Visio, and Wireframing
High-Fidelity, Rapid Prototyping
Automating Image Optimization

Experienced Using Browser DevTools
HTML5, CSS3, JavaScript, SVG
Next.js, React.js + TypeScript
CSS Pre-processors, CSS modules
Frontend Engineering, Microinteractions
Node.js, Express, MongoDB (MERN Stack)
Playwright.js / Jest / Test Frameworks

Cloud Computing via Azure
CosmosDB, Kusto, and NoSQL flavors
Debugging, DGrep, Geneva
AzureDevOps, Azure Portal
ServiceTree, ICM, S360
Git, Source Controllers, Merge Tools
Visual Studio, Visual Studio Code
Command line, bash, Windows, MacOSX

Awards

Awarded 1st Place for #hackHousing at Zillow in Seattle, WA by a panel including the US Census Bureau, HUD, and Data.gov. Publicized on the frontpage of GeekWire for Seattle's largest hackathon to date for design/team leadership, February 2015.

Best of Show at Portfolio Review, Interactive Media Design—Awarded 2007 by The Art Institutes at Soldiers' & Sailors' Hall.

Education

The Art Institute of Pittsburgh, Online and two years at Atlanta's ground campus. Bachelor's of Science, Interactive Media and Game Design—Awarded 2007.

David's early career was devoted to designing interactive media software solutions using Flash at Dealerskins in Nashville, TN. Prior to 2008, he served as Web Designer II at The Center for Rural Development, a 501(c)(3) federal non-profit with periodic consulting for big brands since 2010. He seeks employment at the intersection of design and technology, where he can make an immediate impact by distilling complex problems into synthesized deliverables through new media experiences.
